Two powerful herbicides combine to form a double action "time released" granular soil sterilant. The Diuron goes to work rapidly to destroy the plant from the roots up. This is the initial killing phase. The Bromacil is remarkable slow dissolving, making it possible to extend the herbicide's optimum effect throughout the entire season. This secondary phase provides a long lasting barrier to prevent growth. Excellent product to use when weeds are tall, in sandy soil, or in high rainfall areas.
